À LA CARTE

A line of highly customizable suction and blowing tables.

Start from the machine core and configure the table the way you need it.
Choose the surface shape, and if you want it with point to the left or point to the right, or both!
Add a built-in boiler, if you need it, and all the aåccessories required by your application.

The 4kW automatic boiler with pump can feed up to two irons. The water level is electronically controlled and the pressure vessel is made of stainless steel.

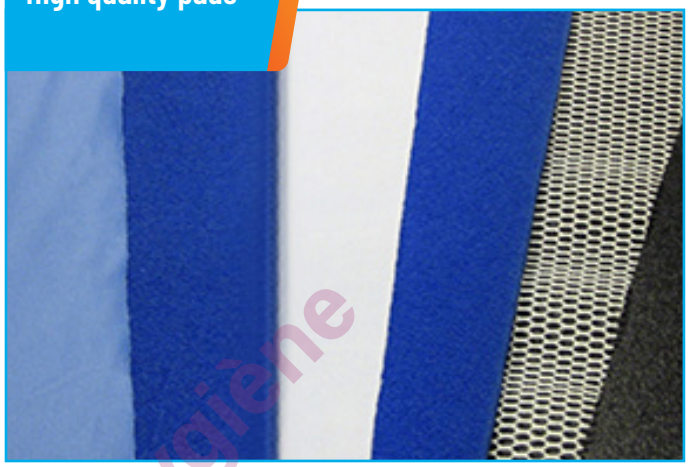
COST EFFICIENT

Low energy consumption and long lasting materials to curb running costs.

Surface heating switch

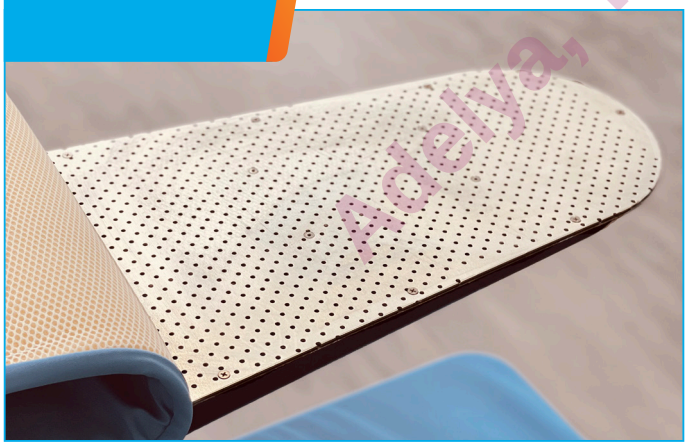
The table can be used either hot or cold. The surface heating element only draws 400W. Thanks to quality pads and optimized suction, ironing with a cold surface does not create condensation.

High quality pads



The standard pad has a double layer of highly transpirant foam and an inlayer of drop stop fabric to ensure a dry surface. Premium pads are available upon request.

Rust free surface



Aluminum ironing surface for long lasting, rust free operation.
